

May 9 AMPR testing in hangar

Submitted by dcecil on Mon, 05/09/2011 - 22:46

- [AMPR](#)

Flight Date:

Monday, May 9, 2011

Status:

Yellow

AMPR was run on the ground for about 5.5 hours Monday. The in-flight problems with the 85 V channel could not be reproduced on the ground. The 37 V channel was not as noisy as it has been in flight, and the 37 H channel ramped up towards saturation at a slower rate than in the flights.
